

Benefits of the Angor 600 Series Bucket Loader Belt

The benefits include:

- Angor 600 Series Bucket Loader Belts are constructed using 11ga. steel for the buckets, 1/4" thick side plates and hollow pin chain with oversized hardened rollers.
- The heavier gauge material for both the buckets and the side plates helps prevent damage and wear.
- With the hollow pin chain system the rollers never have direct contact with the belt pins. Therefore, the belt pins are not compromised by any metal on metal friction.
- The large roller chain maintains the belt's integrity.
- Belt remains in tact if a bucket replacement is required, this make for easy removal of buckets.
- Repairs can be made without having to remove the Angor conveyor from it's station.
- In approximately five minutes a replacement bucket can be installed, meaning your operation will see less down time for repairs.
